

Motor Control Accessories

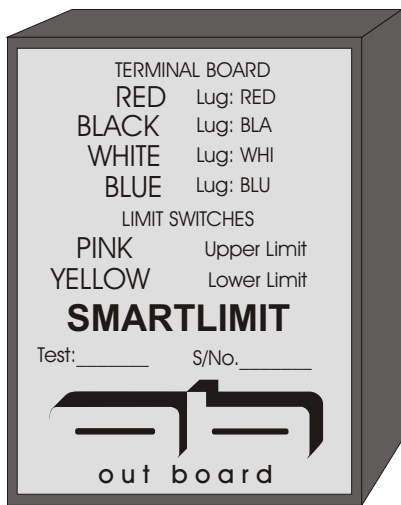

Roving GO button

Hand-held Remote GO button, plugs into front panel XLR3 connector on CM4, CM6 and CM12 controllers via a single two wire cable (or standard XLR mic/line or speaker cable). Allows simultaneous operation of multiple hoists from any monitoring position on stage.

HC4, HC6, HC8 & HC12

Remote control Handcontrollers are available for CM4, DM4, CM6, DM8 and CM12 controllers which duplicate the Up/Down buttons on the unit's front panel, with master momentary GO Button.

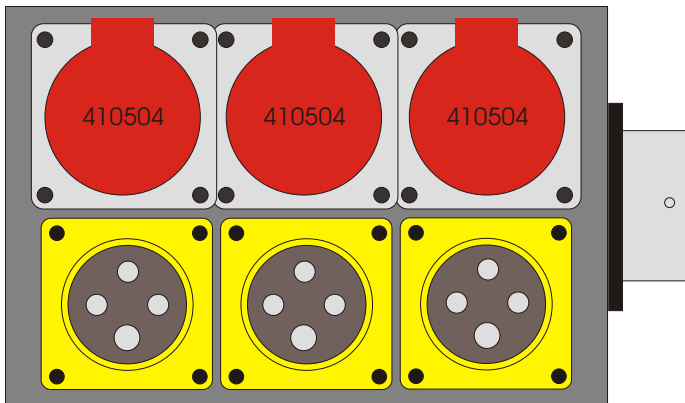

SMARTLIMIT and SMARTSAFE

SMART LIMIT converts a CM chain hoist motor for safe "direct control" by detecting the phase direction in the power cable to maintain the limit switch function by automatically connecting the appropriate limit switch to the control circuit depending on motor direction. This eliminates the need for the control cable and hence reduces installation costs, while maintaining the standard CM safety features.

SMART SAFE automatically detects and corrects for incorrect phase rotation in standard low-voltage control CM hoists.

Splitter Boxes

Trussmounting CM Splitter Boxes are designed to fan out the Socapex 19-way multicores from our CM6 and CM12 controllers, and are fitted with heavy half-coupler truss clamps on their underside.

Also available are trussmounting DM Splitter Boxes, fitted with four red C-Forms in line and a socpex 19-way inlet to match our DM8 Direct Controllers
