## Echo Expansion Bridge

EchoConnect:	Does Not Count
Aux Power:	100 mA or PoE

The Echo Expansion Bridge provides three functions:

- Provide a wireless connection for the EchoAccess mobile app through a connected Wireless Access Point (WAP).
- Combine up to four EchoConnect Power Supplies to create larger Echo control systems.
- Facilitates communication between Echo and Paradigm, allowing Paradigm to control Echo and Echo to tell Paradigm it's status.

# Echo Frequently Asked Questions

**Q:** EchoConnect power supplies are measured in “U”s. What’s a “U”?

**A:** A “U” is a unit of power measurement. A unit counts as one control product and one output product. For example, a 6U power supply would power 6 control products and 6 output products.

**Q:** When should I use a 6U vs a 16U power supply?

**A:** If you have more than 6 control products (stations, sensors, access, etc.) or more than 6 output products (zone controllers, panels, DMX Scene, etc.)

**Q:** When do I need Aux power?

**A:** If you have a TimeClock, EchoAccess, DMX Scene Controller, Echo-Echoflex Interface, Echo Contact Interface, BACnet Interface, Integration Interface, Echo Expansion Bridge or EchoTouch you need an Aux power unit.

**Q:** Do I have to use ETC’s EchoConnect Station Power Supplies?

**A:** Yes. An EchoConnect power supply is required in all Echo systems.

**Q:** Do I have to use ETC’s 24V Aux for auxiliary Power?

**A:** No. Any 24 volt power supply will work. It is not required to be provided by ETC but it is required by the products.

**Q:** What does it mean that EchoAccess is a bonus power-wise?

**A:** The first EchoAccess in a system does not count against your power supply count. So you can have 7 stations on a 6U power supply if one is an EchoAccess station.

**Q:** Can I use more than one power supply?

**A:** Without and Expansion Bridge, no. Only one power supply may be used at a time. Output products that also have power supplies in them have the option to have the power supply turned off.

**Q:** What if I need more than 16 stations?

**A:** Add an Echo Expansion Bridge! That will give you a new max of 64U. But remember, you’ll still need power supplies to account for all the products.

**Q:** Why isn’t my Room Controller Counting as a power supply in the Echo System Summary?

**A:** Make sure you’ve added in the Echo Power Supply Section too!

**Q:** Does ETC offer wall mount power supply options?

**A:** We do! In the form of our E-SPS-DIN power supply and a DIN8 enclosure. This option can be purchased as a single unit with part number 7186K1212. Alternatively, ETC offers a number of DIN rail mounting options in both wall mount and rack mount. The E-SPS-DIN pairs perfectly with any of those options.
