## ”Picture Perfect Pixels” om Live Broadcast VFX i kombination med LED-paneler - (livesändning)

Ziggy Jacobs, Freelancer Programmer, Engineer, and Designer

From live-broadcast VR and arena LED screens to post-production VFX and beyond, video elements – and lighting that integrates with it seamlessly and dynamically – are becoming a crucial part of productions at every scale. Where do you even START matching post-production VFX to studio lighting? Do you need a media server for a lighting-based volume screen? What do you need to create realistic reflections in a VR environment? This session will demystify the new technical playing field. From initial questions to final working system, this session will look at successful models in practice and discuss possibilities for the future of the integrated video-lighting world.
